

Risk-to-Resilience
Exposure Management
Data Sheet

Proactive Cyber Risk Management. Prioritized Remediation. Monthly Peace of Mind.

Today's cybersecurity landscape evolves faster than internal teams can respond. Adversaries exploit vulnerabilities, misconfigurations, and leaked credentials within hours—not months.

Risk-to-Resilience is a cybersecurity improvement program, delivered through a continuous, expert-led service that identifies, prioritises, and remediates security gaps across your cloud, infrastructure, identity, and user landscape – every month.

► Core Services Delivered Monthly

Vulnerability Assessment

Monthly scans across infrastructure, cloud, web apps & APIs with prioritised CVEs

Threat Hunting

Behavioural & IOC-based detection across M365, endpoint, and cloud environments

M365 Security Review

Secure Score trends, config drift detection, mailbox and audit log hardening

Identity Exposures Assessment

Leaked credential detection & identity threat intelligence (via Dela IEM)

Penetration Testing

Quarterly rotating attack simulation aligned with MITRE ATT&CK framework

Remediation Advisory

Guided sessions, scripts, and config changes to fix root causes

Reporting & Metrics

Executive summaries, technical reports, risk reduction tracking, compliance maps

Optional Add-ons: vCISO Advisory • Purple Team Simulations • Executive Information System

▶ Your Monthly Roadmap to Reduced Risk

➔ **Risk-Free Engagement: If we don't reduce your excess breach risk by 90% in 90 days, we'll refund you.**

▶ What You Actually Get

Risk Reduction

Fix what matters, fast

Faster Remediation

From discovery to resolution in weeks, not months

Compliance Confidence

Align with ISO 27001, Essential Eight, CPS 234

Continuous Security Improvement

No more outdated reports or unpatched issues

▶ Who Benefits from Risk-to-Resilience

Our program is ideal for organisations that match any of the following profiles:

Mid to large-sized organisations (typically 200–2,500 users)

Operating in regulated industries – such as finance, healthcare, education, legal, or government

Security-conscious teams overwhelmed by fragmented tools, risk alerts, and limited remediation capacity

IT or security leaders seeking measurable risk reduction – not just more alerts

Outside these categories?

We've helped teams of all sizes and industries enhance security maturity – if cyber risk is a concern, we can support your goals.

▶ Why Choose Us

- Outcome-based, not alert-based
- Root cause remediation, not just issue detection
- Delivered by experts using automation
- Seamless collaboration with your existing team

▶ About CyberDNA

CyberDNA is an Australian cybersecurity company helping organisations across ANZ strengthen risk and resilience through proactive threat exposure management. Our automation-led approach uncovers hidden vulnerabilities, prioritises real-world risks, and enables faster remediation. With a team of seasoned experts and advanced tools, we support CISOs and risk leaders in building stronger, more adaptive security postures.
