

Risk-to-Resilience  
Managed Exposure Program

# Reduce your breach risk by 90% in 90 days – or your money back.

Risk-to-Resilience is a cybersecurity improvement program designed to harden your environment, fix root causes of security weaknesses, and proactively reduce breach likelihood – not just monitor it. Delivered as a managed monthly service, it combines assessments, remediation, and strategic advisory tailored to your organisation's unique exposures.

## Your Monthly Risk-to-Resilience Toolkit

### Vulnerability Assessment

Monthly VA across internal, external, cloud, web, API

### Penetration Testing

One scoped internal or app penetration test per quarter

### Identity Exposures Assessment

Active Directory and Entra ID vulnerability assessment

### M365 Security Assessment

Monthly Secure Score & config drift detection

### Threat Hunting

IOC & behaviour-based threat hunting

### Leaked Credential Monitoring

Automated detection of exposed accounts and identities

### Remediation Support

1 day/week of dedicated support to fix root issues

### Reporting & Executive Dashboards

Power BI dashboards, monthly risk matrix, compliance mapping

**From risk to resilience – one month at a time.**

## Your First 90 Days to Resilience

## Your ROI in Plain Terms

- ➔ Reduce breach likelihood score by ~90% in 90 days
- ➔ Monthly hands-on remediation support – not just advice
- ➔ Aligns with ISO, NIST, Essential Eight, or custom frameworks
- ➔ No results? You get a refund
- ➔ Security leadership without the overhead of full-time hires

## How We Deliver Value Efficiently

- Standardised processes for consistency and speed
- Real-time dashboards for transparency
- Blend of local expertise and global scale
- Flexible delivery models to meet your needs
- Secure automation where appropriate

## For Security Teams Ready to Act, Not Just React

Our program is ideal for organisations that match any of the following profiles:

**Mid to large-sized organisations** (typically 200–2,500 users)

**Operating in regulated industries** – such as finance, healthcare, education, legal, or government

**Security-conscious teams** overwhelmed by fragmented tools, risk alerts, and limited remediation capacity

**IT or security leaders** seeking measurable risk reduction – not just more alerts

### Outside this scope?

We tailor our approach to fit your environment – if reducing cyber risk is a priority, we're ready to support you.

# You don't need more alerts. You need fewer risks. Let's fix that.

We created Risk-to-Resilience to help organisations reduce risk with real outcomes—without the burden of costly tools, scarce cyber talent, or competing priorities. It's a complete, easy-to-adapt solution that detects and fixes vulnerabilities with expert support and proven processes.

– Marco Afzali, CEO & Founder of CyberDNA

## About CyberDNA

CyberDNA is an Australian cybersecurity company helping organisations across ANZ strengthen risk and resilience through proactive threat exposure management. Our automation-led approach uncovers hidden vulnerabilities, prioritises real-world risks, and enables faster remediation. Backed by seasoned experts and advanced tools, we support CISOs and risk leaders in building stronger, more adaptive security postures that keep up with today's dynamic threat landscape.
