cyberDNA

REDUCE ACTIVE DIRECTORY AND ENTRA ID BREACH LIKELIHOOD BY UP TO 90% IN 90 DAYS

MANAGED IDENTITY RESILIENCE

www.cyberdna.com.au

THE REALITY

IDENTITY IS NOW THE PRIMARY BREACH PATH

Attackers don't wait—and neither should you: identity is your business's weakest link, and every misstep is an open door.

The Hard Truth

- Detecting and fixing identity issues requires expensive tools and specialized experts
- Managing identity risks effectively requires multiple tools scattered across domains
- Internal IT teams or MSPs have competing priorities, so remediation is often slow
- Disaster recovery for AD/EntraID is time-sensitive, yet recovery times are often unknown

THE RISK

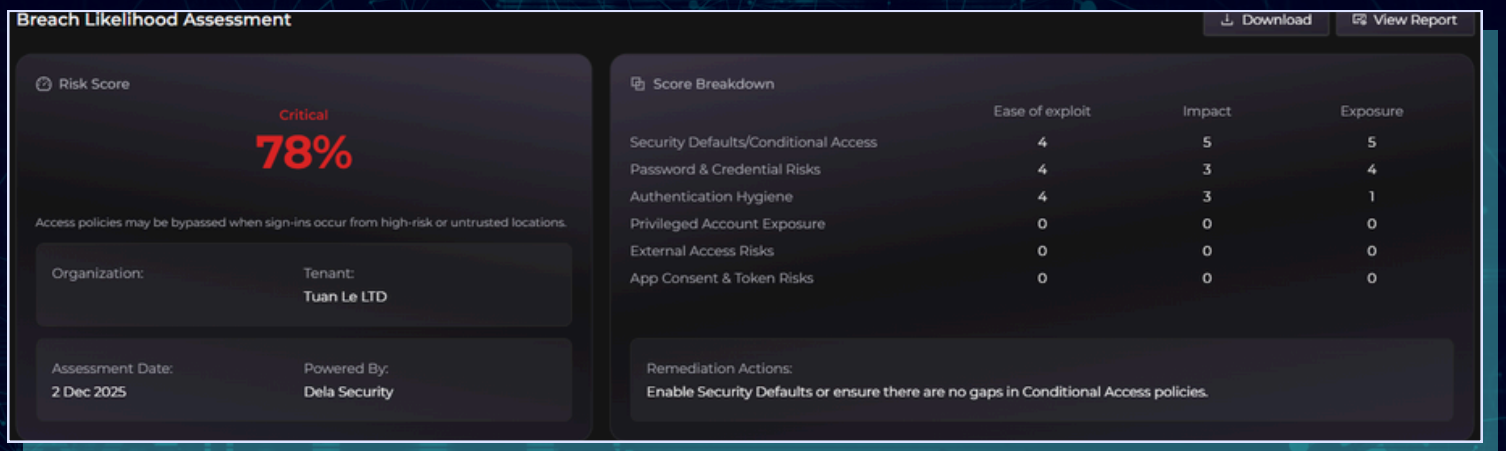
WHEN IDENTITY FAILS, IMPACT ESCALATES FAST

Attackers do not need exploits.
They use valid identities.

- Lateral movement happens silently
- Privileges are abused, not stolen
- Persistence is established through misconfiguration
- Breach impact grows before detection

KNOW YOUR REAL BREACH LIKELIHOOD

BREACH LIKELIHOOD ASSESSMENT



Breach Likelihood Assessment

The Breach Likelihood Assessment establishes a baseline of identity risk and identifies the most likely attack paths in your environment.

The assessment identifies:

- Identity attack paths and lateral movement routes
- Privilege escalation opportunities
- AD and Entra ID misconfigurations
- Likelihood-weighted risk, not hygiene scores

The result is a ranked remediation roadmap directly tied to breach likelihood reduction.

INTRODUCING MIR

MANAGED IDENTITY RESILIENCE

Managed Identity Resilience (MIR) is a SOC-backed service that continuously detects, reduces, and responds to identity risk across Active Directory and Entra ID. **CyberDNA** takes care of the hard work, monitoring, prioritising, guiding remediation, and responding to threats, so your team can focus on running the business.

WHAT MIR DELIVERS

MEASURABLE IDENTITY RISK REDUCTION IN 90 DAYS

- Up to 90% reduction in identity breach likelihood
- Clear visibility into AD and Entra ID exposure
- Fast reduction of exploitable identity risks
- Continuous monitoring and response
- Executive-ready reporting and metrics

HOW IT WORKS

FROM EXPOSURE TO RESILIENCE

Detect

Continuous discovery of identity exposures across AD and Entra ID

Remediate

Guided or automated remediation of exploitable risk

Monitor

24×7 SOC-backed identity monitoring

Respond

Rapid containment of identity threats

Prove

Clear, ongoing measurement of risk reduction

SERVICE TIERS

CHOOSE YOUR LEVEL OF IDENTITY RESILIENCE

1. **MIR Essential**

   Baseline identity risk reduction and continuous exposure management

2. **MIR Advanced**

   Proactive detection, automated remediation, and SOC-led alerting

3. **MIR Elite**

   Adversary-aware monitoring, response, and breach readiness

MIR ESSENTIAL

Designed for organisations that want fast, measurable identity risk reduction without operational overhead.

- Continuous AD and Entra ID exposure scanning
- Visibility into exploitable identity risks
- Guided remediation with clear ownership
- 24×7 monitoring
- Monthly identity risk reporting

MIR ADVANCED

For organisations that want continuous protection and faster risk reduction without manual effort.

Includes everything in Essential, plus:

- Automated remediation for common identity risks
- Advanced identity threat detection
- SOC-led alerting and containment actions
- Monthly technical reporting
- Quarterly executive summaries
- 24×7 SOC coverage with defined SLAs

MIR ELITE

For organisations that treat identity as a critical risk surface, not a configuration task.

Includes everything in Advanced, plus:

- Adversary-aware identity monitoring
- Attack path analysis across AD and Entra ID
- Breach readiness and recovery playbooks
- Executive and board-level reporting
- Named SOC lead and priority response SLAs

SOC-BACKED DELIVERY

DELIVERED BY A DEDICATED IDENTITY SOC

MIR is operated by CyberDNA's SOC using proven runbooks and identity-specific response playbooks.

- **24×7 identity monitoring**
- **Account and session containment**
- **Identity threat validation**
- **Continuous risk validation**

WHO MIR IS FOR

DESIGNED FOR ORGANISATIONS THAT...

01 **Rely on Active Directory and Entra ID**

02 **Face compliance or cyber insurance pressure**

03 **Lack dedicated identity security resources**

04 **Want assurance, not alert fatigue**

WHY CYBERDNA

WHY ORGANISATIONS TRUST CYBERDNA

- Identity-first managed security
- SOC-backed execution
- Microsoft-aligned identity expertise
- Trusted by Toyota, 7-Eleven, Hyundai and many SMBs

START WITH YOUR BREACH LIKELIHOOD

Begin with a complimentary Breach Likelihood Assessment and see how quickly identity risk can be reduced.
